(b) Score cards written or pasted in with the scores on them.

(c) Short simple records of home activities related to the work of the clothing class.

(d) Color wheel and other simple devices for showing how simple color harmonies may be made (correlated with drawing). 2-6

(e) Simple sketches showing various styles of neck lines with suggestions for use of each (Grade VII). b/w

(f) A growing list of health rules to which a new rule is added as the necessity for the practice of it is recognized.

(g) Textile exhibit. Every girl, beginning with Grade V, should make a "textile exhibit" in one part of her notebook. As she makes a garment and learns about the cloth she is using she should mount a small sample of it in her textile exhibit, and as she becomes acquainted with cloth her classmates are using — and she should be interested in their work — she may exchange small samples of cloth and so get a sample of a different kind or quality to mount in her exhibit. A good size for the samples is about 2-1/2 to 3 cm. by about 4 to 5 cm. but they need not be exactly this size.

This exhibit should not be made all at once. It should be started near the beginning of school and should have samples added to it as different scraps of cloth may be secured throughout the year. A girl in Grade VI or VII should add to what she had the year before if she uses the same notebook; if she uses a different one the exhibit pages should be removed from the old book and pasted or sewed into the new one in order that the textile exhibit will be larger and more interesting and useful.

Fifth-grade girls should mount only samples of cloth actually used or studied in class during the year. Sixth-grade girls may add to their booklets samples of cloth used in their class when the cloth is different from that used the year before. Seventh-grade girls should add samples of cloth to what they already have used and studied in their class and samples of various kinds of other cloth in which they may be interested.

3. Lasmarias, Manuel-trfd to GHQ 27th

The pupil herself should select the words to be put in this list. When she, and not the teacher, is responsible for choosing them the girl will be alert for new words. And when the teacher takes special care that new or difficult words used during the previous recitation are brought up during a latter one each pupil will have more interest in learning the meaning and the correct pronunciation of every strange word that is used in the clothing class, and if it proves that recording them in her notebook is helpful to her she will have interest in doing it.

A good teacher will devise many ingenious ways to find out whether or not girls are learning the new and difficult words or idioms. She will provide, in lessons soon after the new words have been introduced, opportunities for their use in regular classroom conversation or perhaps occasionally by tests and so find out if they are understood.

This means that the teacher, too, must keep a list of the new or difficult words and idioms introduced during each lesson.

(i) Other material. Teachers should encourage pupils to put into their notebooks any other material related to clothing and textiles in which they are interested and which they feel may be of immediate or future use to them, but to copy little or nothing from references.

## QUESTIONS

1. Distinguish between a mixture and a solution (paragraphs 8, 133)  
*A mixture is the intermingling of substances which is heterogeneous  
A solution is homogeneous.*
2. When are substances said to have entered into a chemical reaction?  
*Substances are said to have entered into a chemical reaction when  
the substances react to form a new product different from  
the elements or the reactants.*
3. When may a chemical reaction be described as direct union?  
*A chemical reaction may be described as direct union when  
two elements are combined to form a compound.*
4. Distinguish between materials and substances (paragraph 5)
5. Which of these substances dissolve completely in cold water, which only in hot water, and which appear not to dissolve?
6. Which of the preceding materials were tested in this way?  
*Which of these proved only slightly soluble?*
7. Result, and conclusion.  
*Solid magnesium chloride dissolved in  
hot & cold water, while the other materials are slightly soluble.*
8. Explain why distilled water was used in the preceding tests for slightly soluble materials.  
*Cheaper than tap water (contains impurities).*
9. Conclusion, from the fact that heat is liberated?  
*Hydrogen sulfide + sulphuric acid*
10. Describe the change in color that takes place.  
*Hydrogen sulfide + chemical reaction, and*
11. What is a precipitate (paragraphs 22, 203, item 1)?  
*A precipitate is the insoluble solid that separates & settles  
either at the bottom or at the surface.*
12. Color of the substance that is obtained when the filtrate is evaporated?  
*colorless*
13. Describe it.

## EXERCISE 51

*W.R.*

## HYDROGEN SULFIDE AS A PRECIPITANT AND REDUCING AGENT

General Statement.- See Pars. 218, 219, 222, 301, 302.

Materials. - Solutions listed in next paragraph; solutions of  $\text{FeCl}_3$ ,  $\text{K}_2\text{Cr}_2\text{O}_7$ ,  $\text{KMnO}_4$ ,  $\text{I}_2$ ; Solid FeS.

Directions.- (a) Precipitant. Fit a large test-tube with a one-holed rubber stopper, carrying a small funnel or thistle-tube. Over the mouth of the funnel lay a circle of filter-paper, and rest a small dish on this. On the paper place a single drops of solutions of  $\text{Bi}^{+++}$ ,  $\text{Cu}^{++}$ ,  $\text{Cd}^{++}$ ,  $\text{Zn}^{++}$ ,  $\text{Ni}^{++}$ ,  $\text{Sb}^{+++}$ , marked to distinguish them. Acidify each spot with a drop of dilute HCl.

Work neatly. The solutions to be tested- a few drops of each - may be assembled in test-tubes, and the drops transferred to the filter paper on the end of a glass rod (not a glass tube), which is carefully rinsed each time it is used.

In the test-tube place a piece of FeS, about the size of a pea, add a few drops of dil. HCl, and replace the stopper and funnel. Note the colors of any precipitates that may form. (1, 2) If any metal fails to precipitate, repeat the test with a new sample, making the spot alkaline with a drop of dil.  $\text{NH}_4\text{OH}$ . (3,4)

(b) Reducing Agent. - To a few drops of a solution of  $\text{K}_2\text{Cr}_2\text{O}_7$ , add an equal volume of dilute  $\text{H}_2\text{SO}_4$ . Similarly, acidify a solution of  $\text{KMnO}_4$ . Spot a filter-paper with these solutions, and also a solution of  $\text{I}_2$ . Note any evidence of a reaction on treating them with  $\text{H}_2\text{S}$ . (5-9) Mix a few drops of  $\text{FeCl}_3$  solution with about an equal volume of dil. HCl. Note whether  $\text{H}_2\text{S}$  has any action on this mixture. (10)

It is not wise to let those who finish first go on to the next unit before the other girls are ready, because it means that the teacher must make the explanations and demonstrations all over again when their companions begin the work.

Those who finish first should be kept profitably busy while waiting for the others to finish. What they should do can usually be determined best by the teacher.

Suggestions for extra work. The following suggestions may be found useful in providing additional work for those girls who finish first:

(a) Assign them special reading and sometimes have them make short reports on it in class. Perhaps their extra work should consist more of reference reading than of anything else.

Sometimes they might make a short outline of extra reading or make out a short list of questions covering the most important points read, but the writing should never be made a burden.

(b) Encourage girls to make a special kind of emery bag, a small individual hand or "finger" towel, a pillow slip, or other simple useful article for which the teacher may furnish a special pattern or model.

(c) Have them "lay the warp" and weave two or three centimeters of some particular kind of weave, and by this and samples of the cloth demonstrate to the class the characteristics of this weave. Use twine and a small loom. The use of two colors or twine might be instructive and interesting. It could show how stripes or checks may be made in cloth, and how chambray and dimity are woven. (Chambray always has a colored warp and a white woof.)

(d) Help them to design simple covers for their home-economics notebooks. This may be correlated with the work in the drawing class. Special attention should be given to line and color combinations. Such references as Art in Every Day Life will be useful.

(e) Have one or two of the very best workers occasionally make a model, as a buttonhole (partly finished), or a machine fell seam (about 5 to 10 cm. long) to be preserved with other models belonging to the school. (See Models, p. 103 and Standards, pp. 122, 123.)
